Founded by Joe Spease, WindSoHy LLC is an Overland Park, KS energy company developing innovative, large-scale, renewable energy projects that will maximize benefits for investors, customers, local communities, and the environment.

WindSoHy has been successful in identifying and developing several large projects from concept to construction-ready. With these "shovel-ready" projects, WindSoHy is well-positioned to participate in tremendous opportunities now available to improve our national energy infrastructure, create jobs, and reduce our carbon footprint.

In addition to WindSoHy's outstanding portfolio of projects, WindSoHy has exciting energy projects in the planning stages for clients in the Midwest and Asia that will employ renewable energy technologies such as wind, solar, and Compressed Air Energy Storage (CAES) to produce power. Plans to deploy a breakthrough technology combining renewable wind and water resources to create hydrogen for electrical power and fuel are in the planning stages.
